

# Storage Strategies for High Value Data

Wednesday, June 29, 2022 from 11:30 AM – 1:00 PM

5560 Overland Avenue, San Diego, CA 92123

Registration is free and includes complimentary lunch and parking

Register here: <http://sandiegoarma.org/programs.html>

**Speaker: Jesse Charfauros – CEO/Founder**

Join restorVault for an introduction to a revolutionary way of managing High Value Data. We will discuss compliant “tamper-proof” storage for records management “Trusted Systems & Governance CGC 12168.7” and information technology management for “File Systems” leveraging virtualization technology for multi-cloud, and hybrid-cloud installations.

## What if you could...?

- Reduce risk of ransomware
- Reduce recovery time to minutes (DR)
- Leverage virtualization for on-demand access for your data needs
- Reduce costs for storage and data protection for your High Value Data

### Compliant Cloud Archive

Compliant Cloud Archive storage provides long-term retention and on-demand access to unstructured compliance data that may not be altered in any way

#### Benefits:

- Legal Retention 7-30 years
- Automatic Retention Policies
- Impervious to Ransomware
- Secure Real-Time File Access
- Trusted Systems Compliant (CA State Mandate)
- Compliance Audit Trail

### Secure Cloud Backup

SCB provides a hot-standby cloud backup capability that allows for complete disaster or ransomware recovery in minutes, not days.

#### Benefits:

- 30-day Version Regression
- 500x Faster Disaster Recovery
- Impervious to Ransomware
- Secure Real-Time File Access
- Zero Data Recovery Fees

### Offload Data Virtualization

Offload Data Virtualization frees up precious capacity on primary servers by offloading inactive data (reducing wasted space) to a protected Cloud Compliant Archive or Secure Cloud Backup vault, based on policies.

#### Benefits:

- Only Active Files Remain Local
- Conserves Primary Capacity
- Allows On-Demand Access
- Prolongs System Lifespan
- Reduces Associated Costs/CapEx

### Copy Data Virtualization

Copy Data Virtualization allows fast data replication in the cloud through virtualized access to protected Cloud Compliant Archive or Secure Cloud Backup data vaults for functions such as Q/A, Dev, Training, DR, Test, etc.

#### Benefits:

- Avoids Data Duplication
- Uses 80% Less Storage
- Restores Servers in Minutes
- More Servers = More Savings
- Reduces Associated Costs/CapEx
